Green Renew :60

*Considering a new kitchen? Consider this:*

-Showplace Lyptus is a sustainable, renewable hardwood grown on environmentally-managed plantations...

-Showplace Renew is the smart new low-impact way to a new look in your kitchen...

*-Combine the two and you have a hybrid for the home:* The fresh new look you want with a lower expenditure of resources. With the Showplace Renew process from Acme Kitchen & Bath, existing cabinet structures are retained, and less energy is used, lessening the overall environmental impact of your remodel. Your cabinet doors are replaced with renewable Lyptus solid hardwood doors. The faces of your cabinets are skinned with a thin Lyptus veneer. The result is the look of an entire remodel, but with much lower impact. *And that includes lowered impact on your life during the project.* One thing that's not lowered is your creative freedom. Renew offers the *full spectrum* of Showplace styles, finishes and accents so you can fully develop your personal vision. And if your vision calls for replacing some cabinets or adding an accent like a range hood, the full selection of Showplace cabinetry is open to you.

Acme Kitchen & Bath can help you explore your options for making your new kitchen both lovely and green. Acme Kitchen & Bath, on the corner of Main and First.
